***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-3, 28-31 and 36-39 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Joy et al (US 6359233).

Joy discloses a printed wiring board comprised of a substrate (11), bus bar (19) and conductive pads.

The bus bar (19) which contains circuit patterns are formed onto both surfaces of the substrate (11).

The circuit patterns comprised of conductive fingers (23) which is made from copper. Conductive pads are formed onto the end portion of the copper conductive fingers. Each conductive pad is comprised of two layers, the first one is a nickel layer (27) and the second one is a gold layer (29) (Fig. 4 & col 4 L 55-57).

The two layers of the conductive pad is analogous to the first and second plating layers of the metallic surface finish of the present invention.

***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-8 and 28-43 are rejected under 35 U.S.C. 103(a) as being unpatentable over Joy et al (US 6359233) in view of Jackson (US 5097100).

Joy teaches the present invention but does not teach the conductive pad being two gold layers, nor does it teach the thickness of the conductive pad.

Jackson teaches a terminal pad over a substrate. The terminal pad is a gold pad (18) which is formed onto a conductive layer (19). The conductive layer (19) can be a gold layer as well (col 4 L 22-25).

Both the terminal pad (18) and the conductive layer (19) can be the same noble metals such as gold, iridium and platinum, etc. (col 4 L 59-64 & col 5 L 1-3).

Jackson further teaches that the terminal pad (18) is a soft gold having a thickness of 2  $\mu\text{m}$  (col 7 L 47-49).

In view of the prior art teachings, one skill in the art would choose a metallic surface finish that comprises of two gold layers over the copper conductive fingers because the top gold layer is ductile which eases external bonding and the bottom gold layer provides good corrosion resistance (see Jackson, col 2 L 40-44).
